Juliano Sig

AI Engineer | Agent Infrastructure & Product Engineering

github.com/julianosig | easi.run | Contact: x.com/jul1anodev

PROFILE

Creator of easi.run and founder of Shimpz. I build infrastructure that connects AI agents to real applications, spanning Rust systems, Python backends and TypeScript interfaces. My focus is browser automation, persistent sessions, human control and usable products.

SELECTED ENGINEERING EXPERIENCE

easi.run | Creator & maintainer

Open-source, self-hosted Chrome sessions for people and AI agents. Built across the runtime, agent interfaces, session infrastructure, viewer/admin UI, installation and documentation.

- MCP and REST tools, saved browser profiles, per-agent permissions and live human takeover.
- Rust Wayland compositor, display protocol and streaming pipeline with a TypeScript viewer.
- Container lifecycle and egress boundaries, session timeline and replay, CI and benchmark tooling.

Published lab benchmark (2026-10-21): text-scroll bitrate 1,862 vs 16,433 kbit/s for KasmVNC, SSIM 0.990 vs 0.977; typing input-to-draw p50 28 vs 69 ms. Figures are fixture-specific; method, missed targets and tradeoffs are documented.

Source | Engineering case study

Backend, automation & integrations | Private project work

Python/Django services, REST APIs, asynchronous data collection, market-data integrations, subscriptions and payment workflows. Technologies across these projects include PostgreSQL, Redis, WebSockets, Playwright, Rust/Tokio, SvelteKit and Prisma.

pyhouse | Python / ClickHouse query builder

Early library implementation with entities, field operators, filters, joins, aggregation and pagination. View source.

cryptoarbs-front | SvelteKit application frontend

Authentication, account settings, exchange-credential and subscription workflows, reusable form components and API integration. View source.

TECHNICAL FOCUS

Agent infrastructure: MCP, browser runtimes, APIs, persistent state and human control.
Systems: Rust, Linux, Docker, streaming and performance measurement.
Backend & product: Python, Django, PostgreSQL, Redis, ClickHouse, TypeScript and Svelte.

OPPORTUNITIES

AI engineering, agent infrastructure, browser automation and product engineering. Open technical portfolio and contact links above.
